

# Dataset Overview

- ▶ Source: CarDekho Open Dataset
- ▶ 4340 entries, 8 initial features
- ▶ Key columns: Selling Price, Year, Km Driven, Fuel, Transmission

# Data Inspection

- ▶ Loaded CSV using pandas
- ▶ Checked for missing values
- ▶ Inspected data types and sample records

# Data Cleaning

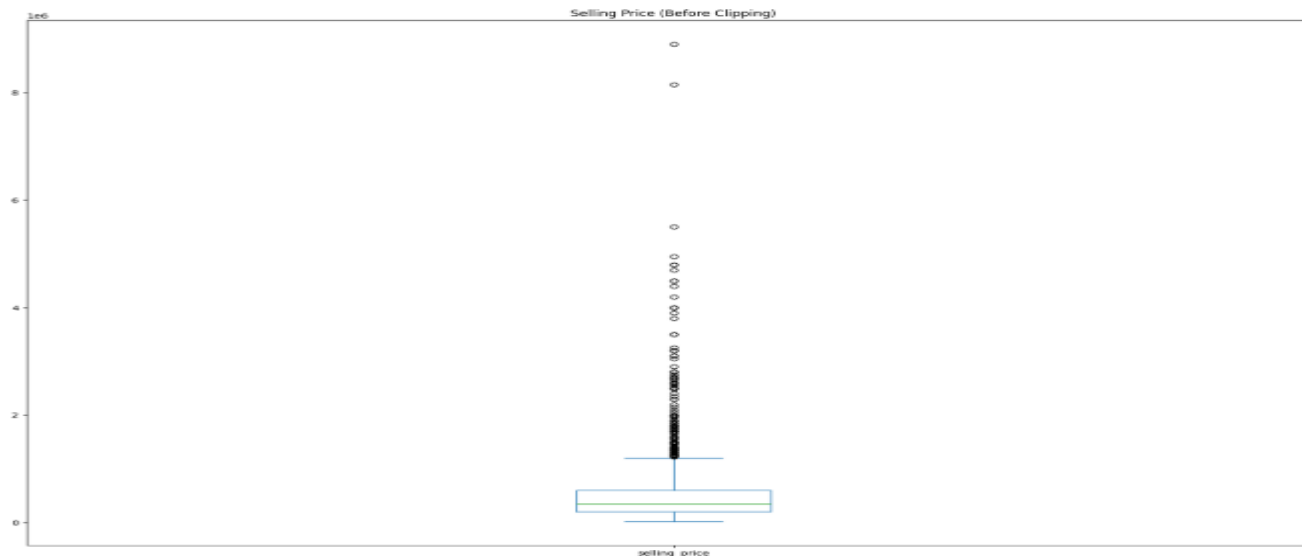

- ▶ Removed 767 duplicate records
- ▶ Dropped irrelevant 'Owner' column
- ▶ Confirmed no missing values

# Feature Engineering

- ▶ Created 'Car Age' =  $2025 - \text{Year}$
- ▶ Calculated 'Price per KM' =  $\frac{\text{Selling Price}}{\text{Kms Driven}}$
- ▶ Grouped prices into categories

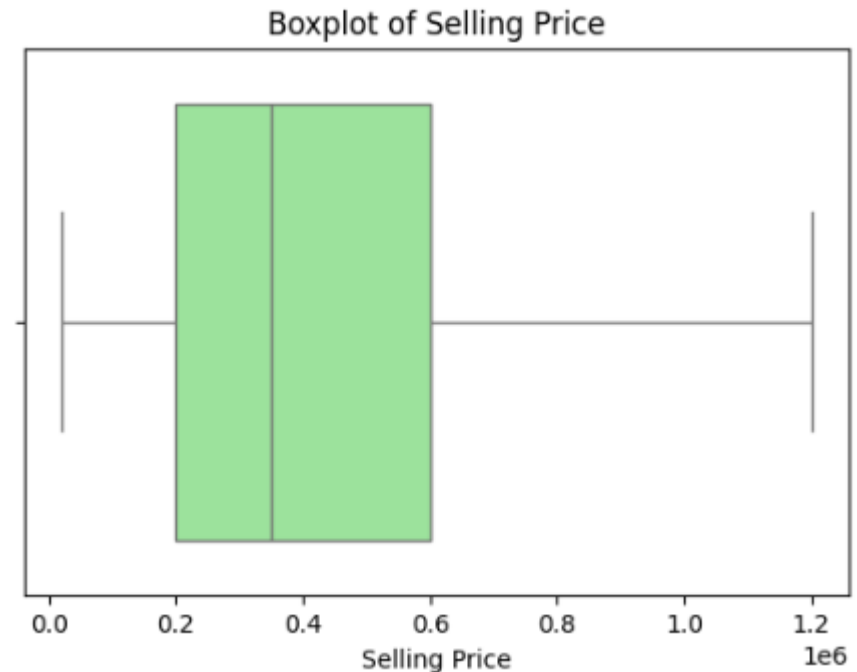

# Outlier Handling

- ▶ Used boxplots to detect outliers
- ▶ Applied IQR clipping to Selling Price
- ▶ Stabilized price distribution

# Univariate Analysis

- ▶ Selling Price: Right-skewed distribution
- ▶ The boxplot shows that most car prices lie between ₹2–5 lakhs, with a few high-value cars extending the range.

# Bivariate Analysis

- ▶ Scatter Plot: Car Age vs Selling Price
- ▶ Correlation Matrix: Car Age and Price (-0.6)

# Visualizations

- ▶ Boxplot: Selling Price vs Fuel Type
- ▶ Barplot: Transmission Type Count

# Key Findings

- ▶ Older cars depreciate faster
- ▶ Diesel cars retain more value
- ▶ Manual transmission dominates market
- ▶ Lower Km Driven improves price

# Conclusion

- ▶ Age, Fuel, Transmission major factors
- ▶ Data Cleaning improved quality
- ▶ Feature Engineering enabled better insights
